24. Research Focus:

My research focus centers on reproductive infectious diseases and family planning in high-risk populations, specifically among HIV-infected women. Other areas of interest include prevention of sexually transmitted infections, adolescent reproductive health, and safe reproductive health delivery both in global and domestic settings. More recently, I have been working on contraceptive and multipurpose prevention technology development as an effort to fill the gaps in the current contraceptive landscape and to provide secondary benefits of HIV and STI prevention. This area of research has tremendous potential to impact global women's healthcare.

25. Grant Support:

a. Active Support:

Federally Funded:

07/01/2018 – 6/31/2023 NIH/NICHD - R01 HD095741-01 (Haddad/Smith)

Immunologic changes associated with three progestin-based contraceptives: characterizing immune profiles over one year and identifying factors that may alter HIV risk This project aims to elucidate the impact of 3 different contraceptives on markers of HIV acquisition in the genital tract over 1 year of use

Role: PI

04/06/2020 – 03/31/2025 1R01AI150360-01 (Teleshova/Friedland/Derby/Zydowsky)

An Etonogestrel/Ethinyl Estradiol/QGriffithsin (ETG/EE/QGRFT) IVR to Prevent Pregnancy and HIV. The Population Council, in collaboration with Oak Crest Institute of Science, proposes to develop a 90d pod-type IVR containing etonogestrel, ethinyl estradiol, and the anti-HIV lectin QGriffithsin (QGRFT) to prevent unintended pregnancy and HIV. The proposed product development plan for the EEQ IVR includes innovative formulation work involving pod IVR designs and the use of silk fibroin to achieve QGRFT release for 90d.

Role: Medical Director

12/01/2019 – 12/31/2020 The Children's Investment Fund Foundation UK (CIFF) (Friedland) Co-encapsulation study completion. This award will support development and stability testing of an over-encapsulated dual prevention pill containing Truvada and a combined oral contraceptive, to be used in a clinical study in Zimbabwe to understand acceptability in a population of AGYW who are currently using oral contraceptive.

Role: Medical Director

11/1/2018 – 10/31/2021 Bill and Melinda Gates Foundation (BMGF)- OPP1191953 (Jensen) Development of a lead candidate for female non-surgical permanent contraception

The BMGF is supporting development of a low-cost highly effective nonsurgical method of permanent contraception for women using a delivery technology geared to low resource settings.

This grant supports technical expertise needed to perform GLP toxicology studies with a GMP formulation of the lead candidate polidocanol/doxycycline foam (PDF).

Role: Medical Director

01/01/2018-12/31/2021 APS-OAA-16-000002 (Zehring)

“MAPs for PrEP: Dissolving microarray patches for long-acting HIV and pregnancy prevention”

The primary objective is to advance development of the dissolving MAP technology for delivery of an ARV for long-acting HIV PrEP. This will be accomplished by developing a dissolving MAP for delivery of an ARV for long-acting HIV PrEP to the point of Phase I clinical readiness and by exploring the potential of a MAP for delivery of an ARV for PrEP and a contraceptive for pregnancy prevention.

Role: Medical Director

09/15/2015-09/14/2020 Lundquist Institute - UCLA/NIH, HHSN27500007 (Sitruk-Ware/Wang)

“Clinical Evaluation of Nestorone Gel and Testosterone Gel for Male Contraception (NES and Tgel Phase 2b)” The objective of this research is to prepare an efficacy and safety multicenter clinical trial testing a Nestorone gel combined with testosterone gel in normal couples volunteering to use the method as their contraceptive. This is a subcontract to UCLA and collaboration with the Contraceptive Clinical Trial Network (CCTN) of NICHD for male contraception.

Role: Medical Director

02/01/2020-07/31/2022 US Agency for International Development, OAA-A-13-00088 (Friedland)

“A randomized, crossover study to compare adherence, acceptability, and preference between a single capsule containing Truvada and a combined oral contraceptive pill (COC) – a dual prevention pill (DPP) – versus two separate pills (Truvada and COC) among sexually active females aged 16-40, at risk of HIV and unintended pregnancy, in Johannesburg, South Africa.”

The purpose of the study is to build evidence for the development of a dual prevention pill (DPP) combining oral PrEP and an oral contraceptive into a single, 28-day regimen, to increase uptake and adherence to PrEP among women at risk of HIV.

Role: Medical Director

b. Previous Support:

04/01/2014 – 03/31/2019 NIH-K23 (Haddad)

Impact of progestin contraception on risk of HIV acquisition and transmission

This K23 mentored career development application will provide support to evaluate the impact of 3 different progestin-only contraceptive methods (Depot medroxyprogesterone acetate (DMPA), Etonogestrel implant and Levonorgestrel Intrauterine device) on immunologic factors in the female genital tract that can modify HIV acquisition risk.
